
PROFILE PLASTICS, INC.

Profile Plastics Adds 3-Axis CNC Routing Capabilities

Profile recently purchased a 3-axis CNC router capable of performing complex fabrication operations. This further adds to our ability to provide our customers added value in their parts. With programming and fixture design capability in-house, and our ability to produce high quality complex parts, our customers can now get parts with complex hole patterns, slots, pockets, steps and a multitude of other configurations. With the automatic tool-changing capability of the router, almost anything is possible.

And as with the other fabrication capabilities Profile offers like punching, bending, printing or embossing, customers can get all of these options very cost-effectively while avoiding the time and cost of dealing with multiple suppliers.

Profile Plastics, Inc. is a custom plastic extruder located in northeast Ohio and extruding a wide variety of materials and shapes. We are most effective when we can provide the best total cost through our ability to add value. This may include design assistance, various fabrication operations, custom packaging and labeling, inventory management or nearly any other process or service you may need. Profile serves a wide variety of industries and markets from agriculture to aerospace and from the medical industry to water and sewer. We do not look for customers or parts that fit our mold. Rather, we look for the right opportunities and find ways to tailor our processes and services to provide effective solutions for you. From your initial idea to the final product, Profile Plastics helps your plastic extrusions take shape. If you would like to learn how we can help you achieve your supply goals, please give us a call at 800-252-6458 or email sales@profileplastics.com.
